Richard N. Palmer

Northeast Climate Adaptation Science Center, University of Massachusetts, USA

Dr. Richard Palmeris a Professor and Department Head of the Civil and Environmental Engineering Department at the University of Massachusetts Amherst. He is currently the University Director of the Northeast Climate Science Center, one of eight national centers funded by the USGS/Department of Interior. His research focuses on the fields of climate impacts on water resources and urban infrastructure and in the application of structured planning approaches to water and natural resource management. These interests include theimpacts of climate change, drought planning, real-time water resource management, and the application of decision support to civil engineering management problems. Dr. Palmer is the author of over 70 per reviewed publications, 75 conference proceedings, and has presented over 100 papers at conferences. He has received over $11 million in research funding during the past 6 years for which he has served as the Principal or Co-Principal Investigator. During the last nine years, the Civil Engineering Department that he chairs has doubled its undergraduate enrollments, tripled the number of Ph.D. students enrolled, and has increased in sponsored research program each year, increasing from $5 million per years in research expenditures to over $13 million per year. Dr. Palmer earned his master and doctoral degrees from Stanford University and Johns Hopkins University, respectively.
